

Oleksiy Odarchuk

Backend Developer (Go) · Creator of the Piton language

Lviv, Ukraine +380 68 645 61 42 me@ishawyha.dev
@NeShawyha github.com/OlexiyOdarchuk ishawyha.dev

Performance-obsessed engineer with a product mindset. 1st place at BEST Hackathon 2026, 3rd at Mate Hackathon, invited to DOU Day 2026 as a Student with High Potential. Builds real products fast — from hackathon MVPs to production Go services.

🚀 WINS & HACKATHONS

🏆 1st Place — Lead Backend & Sensor Fusion

April 18–19, 2026

BEST Hackathon 2026 — GPS-less Drone Trajectory

- Algorithm to **reconstruct a UAV's trajectory without GPS** — from IMU, barometer and other inertial-sensor logs. Sensor fusion in **Go + C**: Go for the pipeline & integration, C inline for the hot numerical kernels.
- 1st place among top teams** — judges singled out the architectural resilience: modular split telemetry / integration / simulation let us swap datasets without rewriting.

🏆 3rd Place — Backend Engineer

March 14, 2026

Mate Hackathon (50 participants, 10 teams)

- Designed and built a Go backend from scratch in **7 hours** for an AI-powered MarTech tool that automates competitor-ad analysis.
- Dual AI pipeline: GPT-4o for marketing trigger analysis + Nano Banana 2 (fal.ai) for creative generation; backend routed all AI calls to cloud APIs, sustaining throughput under hackathon load.
- Beat teams with 5+ years of experience by focusing on a stable MVP — **3rd of 10 teams**.

Security Researcher → Job Offer

2026

College Blockchain System "Student Hryvnia"

- Discovered and exploited a critical vulnerability: frontend capped transaction amounts, **backend had no such check** — enabling arbitrary negative-value transfers. Reported responsibly; received a job offer from administration.
- Reverse-engineered the official JS miner through Webpack bundles — then built a faster Go replacement with a goroutine worker pool (SHMiner — p. 2).

📅 DOU Day 2026 — Student with High Potential

Personally invited by the organisers with a free ticket — a dedicated track for promising student developers.

🔧 TECH STACK

Languages: Go Python C
TypeScript

Backend: Gin Fiber REST
WebSockets Goroutines JWT
OAuth 2.0

Databases: PostgreSQL Redis
ClickHouse

Frontend: Svelte Wails
Tailwind

AI / APIs: GPT-4o Fal.AI

DevOps: Docker Linux (Arch)
Git TinyGo Bruno Typst

🎓 EDUCATION & LANGUAGES

Network Technologies — IT
College NULP, 2nd year
2024 — present

IT Class — Science Lyceum, Rivne
2022 — 2024

Ukrainian — native · **English** — B1

 Piton — My own programming language

[github](#) → [playground](#) → [docs](#) →

Ukrainian transliterated language + interpreter + flowchart generator

Interpreted language with an authentic Ukrainian syntax (in transliteration). Written from scratch in **Go without yacc/bison**: recursive descent parser, tree-walking evaluator, native SVG flowchart generation (D2), Turing-complete. Web playground: interpreter compiled to **WebAssembly via TinyGo** (220 KB vs. 24 MB with stock Go) + a separate Go-WASM module for D2 visualization (lazy-loaded).

- Go
- TinyGo
- WebAssembly
- AST
- D2 / SVG
- Lexer + Parser
- Nix Flakes

SHMiner — Desktop Crypto Miner [github](#) →

Cross-platform desktop miner built with **Wails (Go + Svelte/TypeScript)**. Rewrote SHA-256 hashing from JS to Go with a goroutine worker pool — achieved **1000× faster hashrate** than the official client on identical hardware. AES-encrypted wallet storage, real-time WebSocket dashboard, multi-wallet, zen mode.

- Go
- Svelte
- TypeScript
- Wails
- WebSockets
- Goroutines

LinkShortener Bot [github](#) →

Telegram URL shortener with QR generation and geo analytics. PostgreSQL for storage, Redis for redirect caching, ClickHouse for real-time click analytics (country, city, platform). Docker, GeolIP2.

- Go
- PostgreSQL
- Redis
- ClickHouse
- Docker
- Telegram API

ToDoList Pro — Go + Svelte [github](#) →

Production-grade task manager: Go/Gin backend with clean architecture (repository → service → handler), JWT + OAuth 2.0 (Google), email verification, Swagger docs. Svelte 5 + TypeScript + Tailwind. Multi-stage Docker build.

- Go
- Gin
- Svelte
- TypeScript
- JWT
- OAuth 2.0
- PostgreSQL
- Docker

AbitAssistant Bot [github](#) →

Telegram bot helping Ukrainian students track university admission rankings. Reverse-engineered closed third-party APIs to fetch live competition data. **150+ active users in first year**, marketing campaign planned for 2026.

- Python
- Aiogram
- PostgreSQL
- BeautifulSoup
- Pandas
- Docker

 What I’m Looking For

Role

Strong Junior Go Developer. Ready for intensive work, internship or part-time. Looking for my first serious step in commercial development.

Environment

Teams with solid processes (GitFlow, Code Review). Where ownership is valued and high code quality standards are maintained.

Priorities

Products where architecture decisions and performance matter. Open to complex engineering challenges and fast learning.
